

Digit Nepal

COMPANY

PORTFOLIO

SELECTED DIGITAL PRODUCTS & PLATFORMS

Designing and engineering practical digital systems for businesses, service organizations and growing digital platforms.

Business Systems	Mobile Platforms	Restaurant Technology
Human Resources	HealthTech	Product Engineering

2026 PORTFOLIO OVERVIEW

digitnepal.com

COMPANY PORTFOLIO

Overview

A clear view of the systems and digital products currently managed and developed by Digit Nepal.

Product Engineering End-to-end product thinking, interface design, application development, integration and iterative improvement.	Business Software Operational platforms that replace fragmented manual processes with structured, trackable workflows.
Mobile Experiences Customer, vendor and delivery applications designed around distinct user roles and everyday tasks.	Healthcare Systems Specialized clinic-management solutions focused on practical administrative and patient-service workflows.

HOW ONGOING WORK IS PRESENTED

Projects in this portfolio are identified as active development where appropriate. This keeps the portfolio transparent while still showing Digit Nepal's current capabilities, domain experience and product direction.

Current Project Portfolio

NO.	PROJECT	DOMAIN	STATUS
01	Inventory Management System	Business Operations	Active Development
02	DokoMandu — Customer, Vendor & Delivery Apps	Multi-sided Mobile Platform	Active Development
03	restaurant-pos	Restaurant Technology	Active Development
04	Human Resource Management	Enterprise / HR	Active Development
05	Cardio Clinic Management System	HealthTech	Active Development
06	Eye Clinic Management System	HealthTech	Active Development

CAPABILITIES

What Digit Nepal Builds

A portfolio centered on useful systems, clear workflows and maintainable digital products.

Mobile Application Development Role-based mobile products for customers, vendors, operational teams and service users.	Business Management Systems Inventory, HR, workflow and administrative platforms designed around day-to-day operations.
POS & Restaurant Operations Ordering, billing, kitchen coordination, menu administration and operational reporting.	Healthcare Management Clinic-focused software that organizes appointments, patient administration and service workflows.
UI/UX & Product Design Information architecture, user flows, responsive interfaces and reusable design systems.	Backend & Infrastructure APIs, databases, integrations, deployment environments and operational foundations for scalable products.

PORTFOLIO PRINCIPLE

The focus is not on listing every screen or technology. Each project is presented around the business need, the solution direction and the responsibility Digit Nepal carries in developing and managing the product.

PROJECT 01 / BUSINESS OPERATIONS

Inventory Management System

A centralized system being developed to give organizations clearer control over inventory records, movement and operational visibility.

● ACTIVE DEVELOPMENT

BUSINESS NEED

Inventory becomes difficult to control when stock records are spread across spreadsheets, manual registers or disconnected processes. This can reduce visibility and make routine reconciliation harder.

SOLUTION DIRECTION

Digit Nepal is developing a structured inventory platform that brings core inventory operations into one manageable workflow and provides a clearer view of stock activity.

DEVELOPMENT FOCUS

- Item and category organization
- Stock-in and stock-out workflows
- Supplier and purchase-related records
- Adjustments and inventory movement history
- Low-stock visibility and operational reporting
- Role-based access and controlled administration

DIGIT NEPAL'S ROLE

- Workflow planning
- UI/UX design
- System development
- Data model and API implementation
- Testing and iterative improvement

WHY THIS PROJECT MATTERS

A well-structured inventory system becomes a reliable operational source of truth. The goal is to reduce manual dependency while making stock activity easier to understand and manage.

Portfolio note: The project is actively managed and developed by Digit Nepal. Scope and modules may continue to evolve through delivery, testing and stakeholder feedback.

PROJECT 02 / MOBILE PLATFORM / FOODTECH

DokoMandu

A multi-sided food-delivery ecosystem with dedicated experiences for customers, vendors and delivery partners.

● ACTIVE DEVELOPMENT

BUSINESS NEED

Food delivery depends on several users completing connected tasks: customers discover and order food, vendors manage products and orders, and riders complete pickup and delivery. Poorly connected workflows create friction across the entire service.

SOLUTION DIRECTION

DokoMandu is being developed as an integrated platform in which each user group receives a focused application while sharing a common order and service lifecycle.

DEVELOPMENT FOCUS

- Customer App — discovery, menus, cart, checkout and order tracking
- Vendor App — menu management, availability and order handling
- Delivery App — delivery assignments, pickup verification and status updates
- Notifications and real-time operational updates
- Location-aware delivery workflows
- Ratings, history and post-order experience

DIGIT NEPAL'S ROLE

- Product and workflow design
- Flutter mobile development
- API integration
- State and navigation architecture
- Location and notification integration
- Ongoing product iteration

WHY THIS PROJECT MATTERS

DokoMandu demonstrates Digit Nepal's ability to design a product ecosystem rather than a single standalone application. The three apps solve different jobs while remaining connected to one service journey.

Portfolio note: The project is actively managed and developed by Digit Nepal. Scope and modules may continue to evolve through delivery, testing and stakeholder feedback.

PROJECT 03 / RESTAURANT TECHNOLOGY

Restaurant-POS

A restaurant operations platform focused on billing, order handling, kitchen coordination and day-to-day administrative control.

● ACTIVE DEVELOPMENT

BUSINESS NEED

Restaurant teams need speed and clarity across counters, wait staff, kitchen operations and administration. Disconnected billing and order processes can slow service and make operational control harder.

SOLUTION DIRECTION

restaurant-pos is being developed as a centralized operational system where front-of-house and back-of-house workflows can be managed through role-appropriate interfaces.

DEVELOPMENT FOCUS

- POS billing and order processing
- Menu and item administration
- Kitchen / KOT workflow support
- Role-based access for operational staff
- Receipt and printer-oriented workflows
- Operational history and reporting

DIGIT NEPAL'S ROLE

- Product architecture
- Frontend and backend development
- Database design
- Role and permission design
- Deployment configuration
- Testing and operational refinement

WHY THIS PROJECT MATTERS

The platform is designed around practical restaurant workflows: fast service at the counter, clear handoff to the kitchen and stronger visibility for management.

Portfolio note: The project is actively managed and developed by Digit Nepal. Scope and modules may continue to evolve through delivery, testing and stakeholder feedback.

PROJECT 04 / ENTERPRISE / HR

Human Resource Management

A human-resource platform being developed to organize employee information and recurring HR operations within one system.

● ACTIVE DEVELOPMENT

BUSINESS NEED

HR teams often manage employee records, attendance, leave, payroll-related data and internal reporting through separate tools. This increases repetitive work and makes it harder to maintain consistent records.

SOLUTION DIRECTION

The HRM platform is being developed to centralize core workforce information and structure recurring HR workflows through controlled modules and role-based access.

DEVELOPMENT FOCUS

- Employee profiles and organizational records
- Attendance and work-time information
- Leave and approval workflows
- Payroll-oriented records and reporting
- Role-based access and administration
- Search, filtering and export-ready operational data

DIGIT NEPAL'S ROLE

- Requirement mapping
- UI/UX design
- Web application development
- Backend and database implementation
- Deployment and maintenance
- Ongoing module enhancement

WHY THIS PROJECT MATTERS

The value of HRM is operational consistency. A single structured system helps HR teams reduce repeated manual handling and maintain clearer workforce records over time.

Portfolio note: The project is actively managed and developed by Digit Nepal. Scope and modules may continue to evolve through delivery, testing and stakeholder feedback.

PROJECT 05 / HEALTHTECH

Cardio Clinic Management System

A specialized clinic-management platform being developed to support structured administrative and patient-service workflows for a cardiology setting.

● ACTIVE DEVELOPMENT

BUSINESS NEED

Specialty clinics need reliable coordination between patient registration, appointments, clinical documentation, billing and follow-up activity. General-purpose tools may not reflect the clinic's real workflow.

SOLUTION DIRECTION

Digit Nepal is developing the system around the clinic's operational journey, with the software structured to support day-to-day administration while allowing the workflow to evolve with stakeholder requirements.

DEVELOPMENT FOCUS

- Patient registration and profile management
- Appointment and visit organization
- Clinical record workflow support
- Billing and payment-related administration
- Follow-up and service history
- Administrative reporting and access control

DIGIT NEPAL'S ROLE

- Workflow discovery
- UI/UX and information architecture
- Application development
- Database and API implementation
- Testing with operational feedback
- Ongoing feature refinement

WHY THIS PROJECT MATTERS

A specialty clinic system should make routine work easier without adding unnecessary complexity. The project is focused on organizing information and reducing friction across the patient-service journey.

Portfolio note: The project is actively managed and developed by Digit Nepal. Scope and modules may continue to evolve through delivery, testing and stakeholder feedback.

PROJECT 06 / HEALTHTECH

Eye Clinic Management System

A clinic-management system being developed around the administrative and recurring service needs of an eye-care practice.

● ACTIVE DEVELOPMENT

BUSINESS NEED

Eye-care services involve repeat visits, structured patient records, examination-related information, prescriptions, billing and follow-up. The system needs to keep these workflows organized and easy to retrieve.

SOLUTION DIRECTION

Digit Nepal is developing a tailored platform that brings patient administration and clinic operations into a clearer digital workflow while leaving room for specialty-specific modules as requirements mature.

DEVELOPMENT FOCUS

- Patient registration and visit history
- Appointment and follow-up management
- Examination-record workflow support
- Prescription and service documentation
- Billing and payment administration
- Reports, search and controlled user access

DIGIT NEPAL'S ROLE

- Requirement and workflow mapping
- Product and interface design
- Web application development
- Backend and database engineering
- Testing and stakeholder iteration
- Ongoing system management

WHY THIS PROJECT MATTERS

The project extends Digit Nepal's HealthTech capability into a specialty environment where continuity of records, quick retrieval and understandable workflows are especially important.

Portfolio note: The project is actively managed and developed by Digit Nepal. Scope and modules may continue to evolve through delivery, testing and stakeholder feedback.

DELIVERY MODEL

How Projects Are Developed

A practical delivery cycle that keeps business requirements, product design and engineering aligned.

01 DISCOVER Understand the business process, users, constraints, existing tools and intended outcome.	02 STRUCTURE Translate requirements into modules, user roles, data relationships and clear workflow boundaries.
03 DESIGN Create user flows, interfaces and reusable patterns that keep the product understandable and consistent.	04 BUILD Develop the application, APIs, data layer and integrations using an architecture suited to the project.
05 VALIDATE Test workflows, permissions, edge cases and usability; collect feedback from stakeholders and operational users.	06 IMPROVE Refine the product through staged releases, maintenance and ongoing feature development.
ONGOING DEVELOPMENT IS NORMAL For active products, “under development” is not presented as a weakness. It shows that Digit Nepal is currently responsible for building, managing and improving real systems as requirements and usage evolve.	

ENGINEERING

Technology & Quality Approach

Technology is selected to fit the product, team and operating environment rather than being used as a portfolio buzzword.

Mobile Flutter, Kotlin, Swift and modern mobile development practices for role-focused, responsive application experiences.	Web Modern component-based frontend development for administrative, operational and customer-facing systems.
Backend API-driven application services, structured business logic and secure integration between product modules.	Data Relational and document-oriented data models selected according to workflow, reporting and scale requirements.
Infrastructure Containerized deployment, reverse proxy configuration, cloud/VPS environments and environment-based releases.	Quality Role and permission validation, workflow testing, responsive QA, error handling and iterative stakeholder review.

Technology Examples Across Current Work

CURRENT STACK EXAMPLES

Flutter • React / Next.js • Node.js / NestJS • PostgreSQL • Redis • Firebase • Docker • Nginx • REST APIs

Technology varies by project. The portfolio should emphasize the business problem and delivered workflow first, with the stack shown as supporting engineering context.

ONGOING PORTFOLIO

More Work Is Under Development

The projects shown here represent a selected view of Digit Nepal's current product and system-development work.

**SELECTIVE BY DESIGN**

Additional projects may remain unpublished while they are under active development, subject to client confidentiality, or not yet ready for public case-study presentation.

The portfolio can expand as projects reach appropriate milestones and receive approval for public presentation.

RECOMMENDED PUBLIC WORDING

"Digit Nepal is actively managing and developing a growing portfolio of mobile applications, business-management systems, restaurant technology and specialized healthcare platforms. Selected projects are presented based on development stage and disclosure readiness."

BUILD WITH DIGIT NEPAL

From a first workflow to a complete digital product, we focus on systems that are understandable, maintainable and useful in daily operations.
